

my megu k-lift guide:
gentle solution

prep: balm the lashes

lift the lashes onto the flat lifting pad using **my megu butter balm**: focus on the mid section and tips of the lashes

step one: perm cream/softening solution

apply step one to the lashes: focusing on full coverage of the roots but still covering the mid section and tips. cover with perm paper or plastic wrap

***when using Gentle Solution, avoid contact with the client's skin. for added protection, apply a barrier cream (such as petroleum jelly) along the skin above the lash line to help prevent irritation.*

step one *timing*

for most clients: leave on for ~10 minutes without touching it

for compromised/damaged lashes: remove from tips after 5 minutes, leave on for only ~7 minutes

for thin lashes: leave on for ~7 minutes

for thick lashes: leave on for ~12 minutes

***if leaving on for longer than 10 minutes, only leave product at the roots of the lashes and remove from tips/midsection**

after proper timing, check + clean the lashes

first, fully clean the lashes using distilled water. check the state of the lashes: they are fully softened when they lay flat on the pad. if they are not fully softened (lifting from the pad), continue spot treating until fully softened

step 1.5: applying lashes onto the rod

apply the lashes onto the properly sized rod using my megu silk protein treatment (purchased separately). no need to rinse off solution, just ensure that there are no clumps before continuing onto step two. if many lashes are resisting, they may not be fully softened.

step two: applying neutralizer/setting cream

apply the setting cream evenly onto the lashes from root to tip. leave on for 4-6 minutes

finishing steps: cleaning + coating essence

remove the step two solution, remove the rod, and double cleanse the lashes with water to ensure no residue is left behind. finish off by applying my megu coating essence using a microswab (the more product you use → anime style).

happy lash lifting! 

need more details or guidance?

enroll in the comprehensive online korean lash lift course for access to choosing rod and shields, troubleshooting difficult lash and eye types, troubleshooting incorrect lash lifts, understanding the chemistry behind each product, and *much much more!*

plus, you'll have lifetime lash lift mentorship from megen to help you through every problem :)
